

Mini-World Description:

You are starting your journey into the world of Pokémon, you stumble across a Pokémon you don't know so you pull out your Pokédex, but oh no it looks like the database was wiped clean due to unforeseen circumstances (thanks intern) and you need to now create a new one to help not only yourself but also your fellow Pokémon trainers across the globe.

Each Pokémon has attributes such as its Pokédex ID, Name, Pokémon Elemental Type(s), and Evolves Into.

Pokémon have a Nature which influences their stats. Every Nature will have a Name, the Increased Stat, and the Decreased Stat. Pokémon also innately has an Ability which has a Name and can be Hidden or not.

Pokémon also learn various attacks which are called Moves. Every Move a Pokémon has a Pokémon Elemental Move Type, a Name, the Accuracy of that move, the Power of that move, and the PP (Power Points) the Move has.

A Pokémon may evolve into another Pokémon based on specific conditions such as being introduced to an Item like an Evolution Stone or meeting a level requirement. The Items Pokémon use have a Name and a Category they belong to.

Some Pokémon may have the ability to specifically evolve into a Mega Pokémon or a Primal Pokémon. A Mega Pokémon will have its own Mega Pokémon Elemental Type and will hold one Megastone. Some Pokémon, such as Charizard, have their own unique Mega Pokémon Name and ID when they evolve and can be a Mega X or a Mega Y type Pokémon. A Primal Pokémon will have its own Primal Pokémon elemental type and its own Primal Pokémon name. Both Primal and Mega Pokémon will have a Special Form ID assigned to them as well as their Pokédex ID.

Pokémon are native to a specific region. Some Pokémon may be native to more than one region. Certain Pokémon have Regional Forms that are specific to a region like Alola and Galar. In these regions, some Pokémon may have an Elemental Type Difference from its original Form.

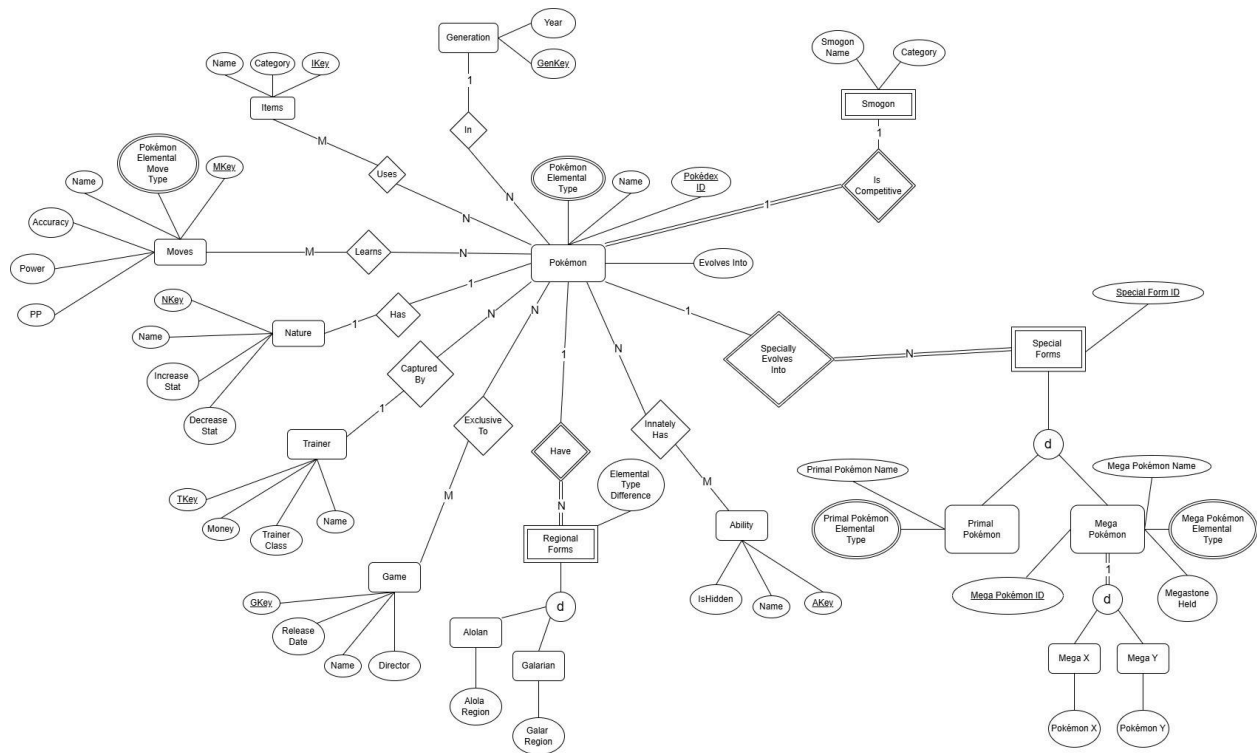

Every Pokémon has been introduced to the games through its generation. Currently, there are nine generations of Pokémon. Each generation has games associated with it that came out at that time. The Generation will be correlated with the Year the game was released.

Pokémon appear in the games which define/start the generation. All Pokémon games have a Name (Pokémon Red, Pokémon Blue, Pokémon Gold, etc.), Release Date, and Director.

Some Pokémon in the games are considered more Competitive than other Pokémon. A website called Smogon was created to determine if a Pokémon is competitive or not. Every Pokémon on the Smogon website will have a Category, Pokédex ID, and a Smogon Name.

In Pokémon media, Pokémon are captured by Trainers. In the games, Trainers have a Name, a Trainer class, and Money they give when defeated.

EER Diagram:

EER Diagram Assumptions:

Relationships:

N:M Cardinality:

- A **Pokémon** can learn more than one **Move**, and a **Move** can be learned by more than one **Pokémon**.
- A **Pokémon** can have more than one **Ability**, and an **Ability** can be shared by multiple **Pokémon**.
- A **Pokémon** may use multiple **Items**, and an **Item** can be used by multiple **Pokémon**.
- Many **Pokémon** are exclusive to many **Games**. Many **Games** are exclusive to many **Pokémon**.

1:N Cardinality:

- One **Pokémon** may have multiple **Regional Forms**, but each **Regional Form** is specific to a **Pokémon**.
- Many **Pokémon** can only be in one **Generation**.
- Many **Pokémon** can be caught by one **Trainer**.
- One **Pokémon** can **evolve specifically into** one or more than one **Special Form**.

Entity Dictionary:

Entity: Ability

Description:

Represents abilities Pokémon can have, providing various effects in battle or outside.

Attributes:

- **IsHidden**, TINYINT(1), whether the ability is hidden or not.
 - **Name**, VarChar(50), the name of the ability (e.g., "Levitate", "Overgrow").
 - **AKey**, Integer, the unique identifier for the ability.
 - **Primary Key: AKey**
-

Entity: Alolan

Description:

Alolan is a form that some Pokémon take as they have adapted to the unique environment of the Alola region.

Attributes:

- **Alola Region**, VarChar(45), the Pokémon's region of origin.
 - **Primary Key:** Inherits **Pokédex ID** from superclass Forms.
-

Entity: Galarian

Description:

Galarian is a form that some Pokémon take as they have adapted to the unique environment of the Galar region.

Attributes:

- **Galar Region**, VarChar(45), the Pokémon's region of origin.
 - **Primary Key:** Inherits **Pokédex ID** from superclass Forms.
-

Entity: Game

Description:

Represents the Pokémon games where players act as trainers and catch Pokémon.

Attributes:

- **Name**, VarChar(50), the name of the game (e.g., "Pokémon Red", "Pokémon Sword").
 - **GKey**, Integer, a unique identifier for the game.
 - **Release Date**, Date, the game's release date.
 - **Director**, VarChar(50), the name of the game's director.
 - **Primary Key:** **GKey**
-

Entity: Generation

Description:

A generation is a grouping of Pokémon games released within a certain period of time which is distinguished by the Pokémon they include.

Attributes:

- **Year**, YEAR, the year the game was released.

- **GenKey**, Integer, a unique singular identifier for the generation.
 - **Primary Key: GenKey**
-

Entity: Items

Description:

Represents items in the Pokémon world that Pokémon can use.

Attributes:

- **Name**, VarChar(50), the name of the item (e.g., "Potion", "Poké Ball").
 - **Category**, VarChar(50), the type/category of the item (e.g., "Healing", "Battle").
 - **IKey**, Integer, the unique identifier for the item.
 - **Primary Key: IKey**
-

Entity: Mega Pokémon

Description:

Represents Pokémon that undergo Mega Evolution, a transformation in battle.

Disjoint: Mega X, Mega Y

Attributes:

- **Mega Pokémon Name**, VarChar(50), the name of the Mega Pokémon.
- **Mega Pokémon ID**, Integer, the ID of the Mega Pokémon.
- **Megastone Held**, VarChar(50), the item needed to trigger the Mega Evolution (e.g., "Venusaurite").
- **Mega Pokémon Elemental Type**, VarChar(50), the elemental type of the Mega Pokémon (e.g., "Grass", "Fire").
- **Primary Key:** Inherits **Pokédex ID** from superclass Pokémon, **Mega Pokémon ID**

Entity: Mega X**Description:**

A unique form of a Mega Pokémon that originated in Pokémon X.

Attributes:

- **Pokémon X**, VarChar(50), the name of the Pokémon.
 - **Primary Key:** Inherits **Pokédex ID** from superclass Pokémon
-

Entity: Mega Y**Description:**

A unique form of a Mega Pokémon that originated in Pokémon Y.

Attributes:

- **Pokémon Y**, VarChar(50), the name of the Pokémon.
 - **Primary Key:** Inherits **Pokédex ID** from superclass Pokémon
-

Entity: Moves**Description:**

Represents moves that Pokémon can use in battle.

Attributes:

- **Name**, VarChar(50), the name of the move (e.g., "Flamethrower", "Thunderbolt").
- **Pokémon Elemental Move Type**, VarChar(50), the elemental type of the move (e.g., "Fire", "Electric").
- **MKey**, Integer, the unique identifier for the move.
- **Accuracy**, Integer, the accuracy of the move (as a percentage, e.g., 100).

- **Power**, Integer, the base power of the move (e.g., 90).
 - **PP**, Integer, the number of times the move can be used (Power Points, e.g., 15).
 - **Primary Key: MKey**
-

Entity: Nature

Description:

Represents the nature of a Pokémon, which affects its stats.

Attributes:

- **Name**, VarChar(50), the name of the nature (e.g., "Adamant", "Modest").
 - **Increase Stat**, VarChar(50), the stat that is increased by this nature (e.g., "Attack").
 - **Decrease Stat**, VarChar(50), the stat that is decreased by this nature (e.g., "Special Attack").
 - **NKey**, Integer, the unique identifier for the nature.
 - **Primary Key: NKey**
-

Entity: Pokémon

Description:

Represents Pokémon species in the Pokémon world.

Attributes:

- **Name**, VarChar(50), the name of the Pokémon (e.g., "Pikachu", "Charizard").
- **Pokémon Elemental Type**, VarChar(50), the type(s) associated with the Pokémon (e.g., "Electric", "Fire").
- **Pokédex ID**, Integer, the unique identifier for the Pokémon in the Pokedex.
- **Evolves Into**, VarChar(50), the name of the next evolution of this Pokémon.
- **Primary Key: Pokédex ID**

Entity: Primal Pokémon

Description:

An ancient evolution of a Pokémon.

Attributes:

- **Primal Pokémon Name**, VarChar(50), the name of the Primal Pokémon (e.g., "Primal Kyogre", "Primal Groudon").
 - **Primal Pokémon Elemental Type**, VarChar(50), the type(s) associated with the Primal Pokémon (e.g., "Electric", "Fire").
-

Entity: Regional Forms

Description:

Regional Forms are variations of Pokémon within a species. Two Pokémon can be of the same species but have different appearances because of the biome they are from, and these differences are known as Regional Forms.

Disjoint: Alolan, Galarian

Attributes:

- **Elemental Type Difference**, SET, the name(s) of the Pokémon's new Elemental Type in the region.
 - **Primary Key:** Inherits **Pokédex ID** from superclass Pokémon.
-

Entity: Smogon

Description:

Represents competitive viability of a Pokémon.

Attributes:

- **Smogon Name**, VarChar(50), the name of the Pokémon (e.g., "Pikachu", "Charizard").
 - **Category**, VarChar(50), the competitive tier the Pokémon qualifies for based on its performance and usage in the competitive scene.(e.g., "Uber", "OU").
 - **Primary Key**: Inherits **Pokédex ID** from superclass Pokémon.
-

Entity: Special Forms

Disjoint: Primal Pokémon, Mega Pokémon

Description:

Certain Pokémon may evolve into a form that is different from regular evolution.

Attributes:

- **Special Form ID**, Integer, the unique identifier for Pokémon with a Special Form.
 - **Primary Key: Special Form ID**
-

Entity: Trainer

Description:

Represents Pokémon trainers who capture Pokémon.

Attributes:

- **Name**, VarChar(50), the name of the trainer.
- **Trainer Class**, VarChar(50), the class/type of trainer (e.g., "Gym Leader", "Ace Trainer").
- **Money**, DECIMAL, the amount of money the trainer holds (e.g., 1000).
- **TKey**, Integer, the unique identifier for the trainer.
- **Primary Key: TKey**

Relationship Dictionary:

Relationship: Captured By

Description: Trainers capture Pokémon.

Entities: Pokémon, Trainer.

Cardinality: One Trainer can capture Many Pokémon.

Participation: Partial-to-Partial.

Relationship: Exclusive To

Description: Some Pokémon are exclusive to certain games.

Entities: Pokémon, Game.

Cardinality: Many Games can have Many exclusive Pokémon.

Participation: Partial-to-Partial.

Relationship: Has

Description: Each Pokémon has a specific nature.

Entities: Pokémon, Nature.

Cardinality: One Pokémon has One Nature.

Participation: Partial-to-Partial.

Relationship: Have

Description: Pokémon can have regional variants which are called forms.

Entities: Pokémon, Forms

Cardinality: One Pokémon may have Many Forms.

Participation: Partial-to-Total.

Relationship: In

Description: Some Pokémon are exclusive to a specific Generation.

Entities: Pokémon, Generation

Cardinality: Many Pokémon are in One Generation.

Participation: Partial-to-Partial.

Relationship: Innately Has

Description: Pokémon have certain abilities innately.

Entities: Pokémon, Ability.

Cardinality: Many Pokémon can have Many Abilities.

Participation: Partial-to-Partial.

Relationship: Is Competitive

Description: Pokémon is viable in a competitive scene.

Entities: Pokémon, Smogon.

Cardinality: One Pokémon qualifies for One Smogon tier.

Participation: Total-to-Partial.

Relationship: Learns

Description: Pokémon can learn different moves.

Entities: Pokémon, Moves.

Cardinality: Many Pokémon can learn Many Moves.

Participation: Partial-to-Partial.

Relationship: Specifically Evolves Into

Description: Some Pokémon can evolve into a specific form of Pokémon.

Entities: Pokémon, Special Forms.

Cardinality: One Pokémon can Specifically Evolve into one or Many Pokémon forms.

Participation: Partial-to-Total.

Relationship: Uses

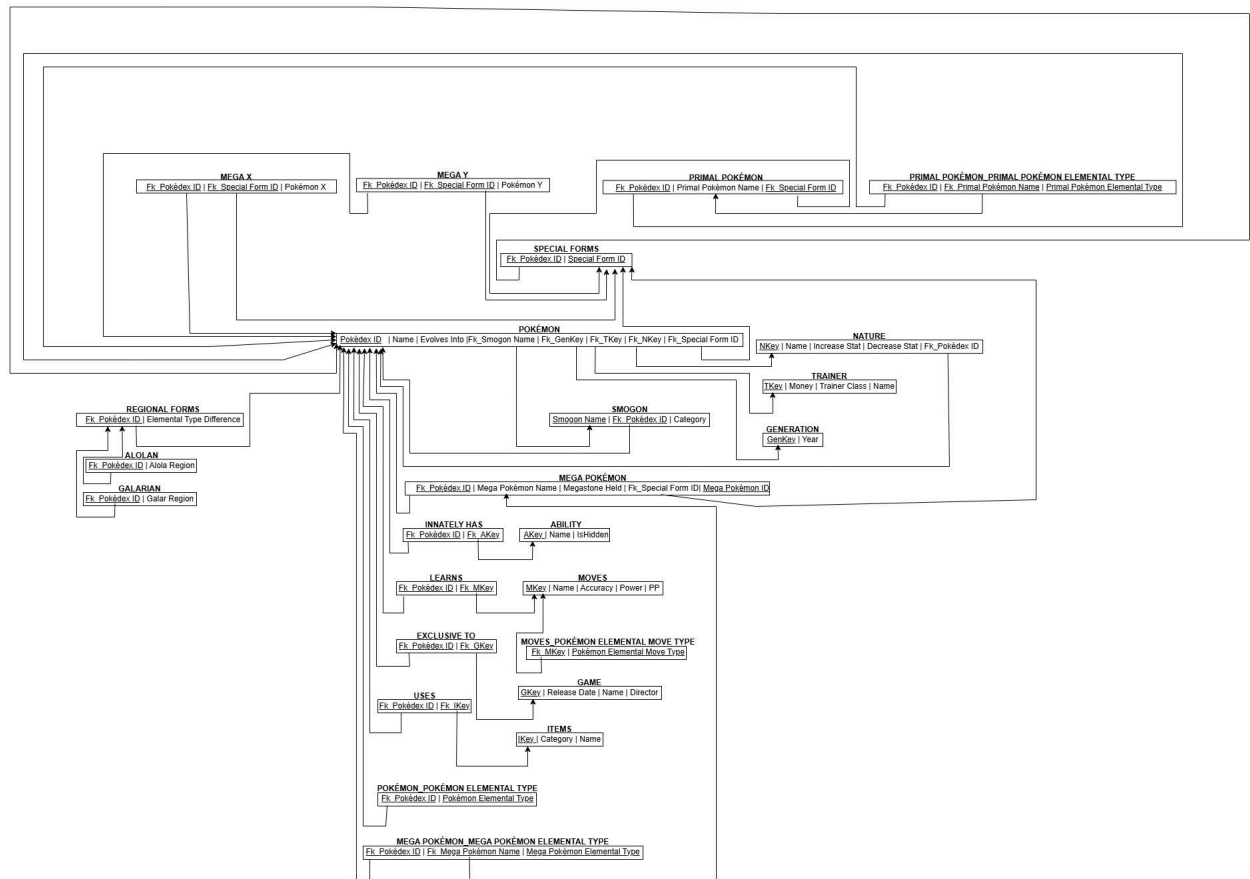

Description: Pokémon use Items.

Entities: Pokémon, Items.

Cardinality: Many Pokémon can use Many Items.

Participation: Partial-to-Partial.

Relational Schema Diagram:

Relational Schema Dictionary:

Name: ABILITY

Description: Represents abilities Pokémon can have, providing various effects in battle or outside.

Attributes:

- AKey, Int, The unique identifier for the Ability
- Name, VarChar(50), The name of the Ability (e.g., “Levitate”, “Overgrow”)
- IsHidden, TINYINT(1), Marks if the Ability is hidden (1/true or 0/false)

Primary Key: AKey

Name: ALOLAN

Description: A Form that some Pokémon take as they have adapted to the unique environment of the Alola region.

Attributes:

- Fk_Pokédex ID, Int, A reference to the Pokémon's Dex number
- Alola Region, VarChar(45), The name of the Alolan Pokémon

Primary Key: Fk_Pokédex ID

Foreign Key: Fk_Pokédex ID references FORMS.Fk_Pokédex ID

Name: EXCLUSIVE TO

Description: Some Pokémon are exclusive to certain games.

Attributes:

- Fk_Pokédex ID, Int, A reference to the Pokémon's Dex number

Foreign Key: Fk_Special Form ID references SPECIAL FORMS.Special Form ID

Name: MOVES

Description: An attack or technique a Pokémon may use in battle.

Attributes:

- MKey, Int, The unique identifier for the Move
- Name, VarChar(50), The name of the Move (e.g., "Flamethrower", "Thunderbolt")
- Accuracy, Int, The accuracy of the Move (as a percentage, e.g., 100)
- Power, Int, The strength of the Move (e.g., 90)

- PP, Int, The initial Power Points a Pokémon has to use a Move

Primary Key: Mkey

Name: MOVES_POKÉMON ELEMENTAL MOVE TYPE

Description: Every Move a Pokémon has will have an element assigned to it as a type.

Attributes:

- Fk_MKey, Int, Identifies the Move's Number
- Pokémon Elemental Move Type, VarChar(50), The elemental type of the move (e.g., "Fire", "Electric")

Primary Key: Fk_MKey, Pokémon Elemental Move Type

Foreign Key: Fk_MKey references MOVES.Mkey

Name: NATURE

Description: Represents the personality of a Pokémon, which affects its stats.

Attributes:

- NKey, Int, The unique identifier for the Nature
- Fk_Pokédex ID, Int, A reference to the Pokémon's Dex number
- Name, VarChar(50), The name of the Pokémon's Nature (e.g., "Adamant", "Modest")
- Increase Stat, VarChar(50), The stat that was increased by the Pokémon's Nature (e.g., "Attack")
- Decrease Stat, VarChar(50), The stat that was decreased by the Pokémon's Nature (e.g., "Special Attack")

Primary Key: NKey

Foreign Key: Fk_Pokédex ID references POKÉMON.Pokédex ID

Name: POKÉMON

Description: A monster which can be tamed and captured by a Trainer. The most basic entity in the Pokédex.

Attributes:

- Pokédex ID, Int, The unique identifier for the Pokémon in the Pokédex
- Name, VarChar (50), The name of the Pokémon (e.g., “Pikachu”, “Charizard”)
- Evolves Into, VarChar(50), The name of the next evolution of this Pokémon
- Fk_Smogon Name, VarChar(50), A reference to the Pokémon’s name on the Smogon website
- Fk_GenKey, Int, A reference to the Generation the Pokémon was introduced in
- Fk_TKey, Int, A reference to the Trainers that use this Pokémon
- Fk_NKey, Int, A reference to the Pokémon’s Nature
- Fk_Special Form ID, Int, A reference to the Pokémon’s Special Form
